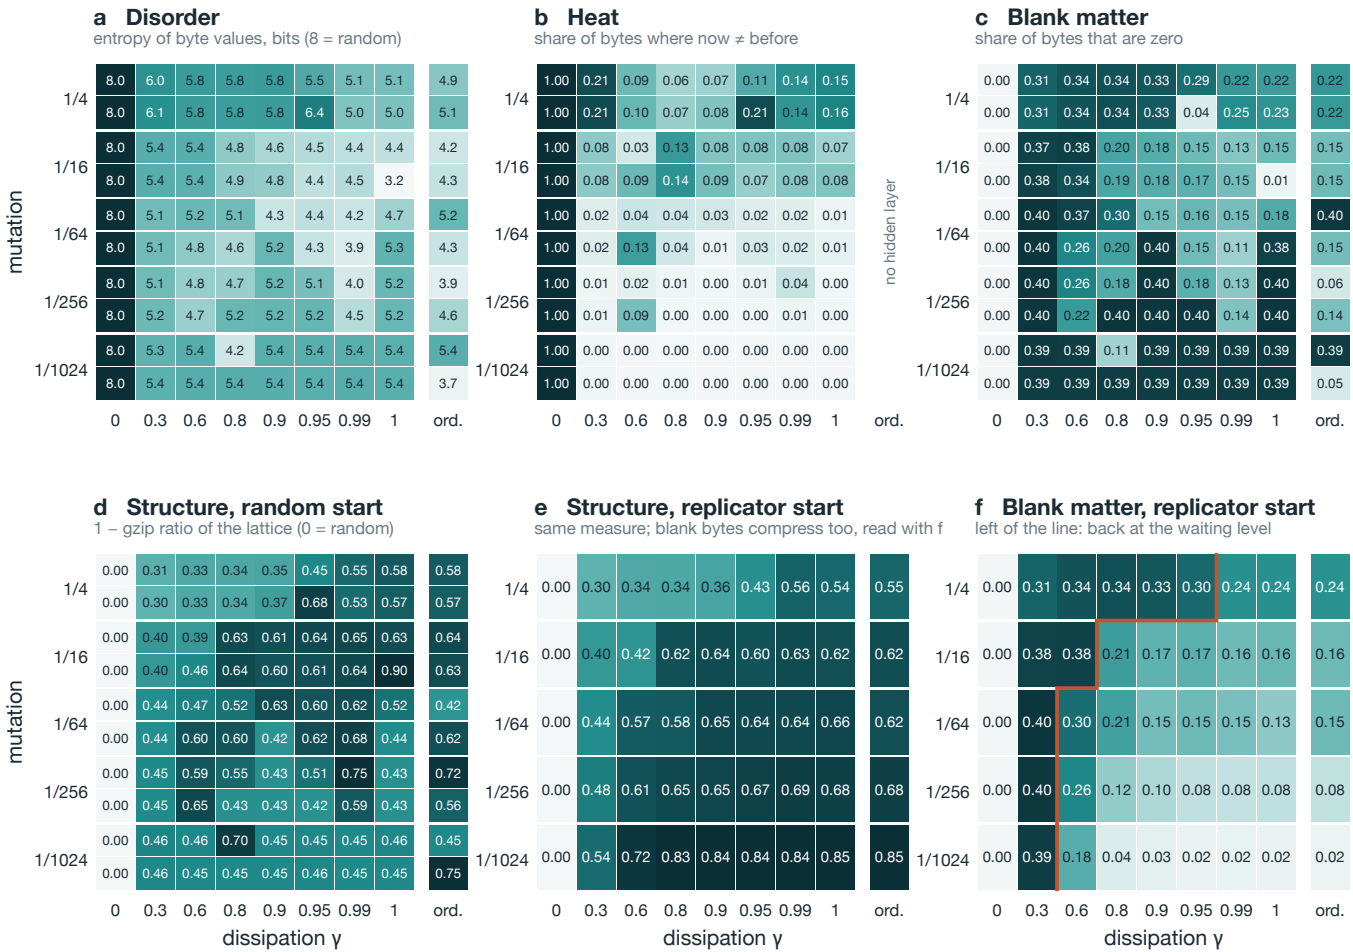
What was measured across the two dials (pilot)


a–d: random start, 4,000 updates; each cell shows its two runs, one above the other. e, f: replicator start, 2,000 updates, one run.
'ord.' = the ordinary overwrite rule. Darker = more; colours saturate at the scale ends, so read the numbers.
In a–d a run has either been taken over by a replicator or not, so two runs of a cell often disagree.
