

Historical Z80 core; L = tape bytes; n = 10 per L

Teal blocks: A / copied bytes; grey blocks: occupied partner B; orange c0: RET NZ.
Teal arcs: writes; orange arc: conditional return. Selected bytes shown; ellipses omit positions.
e3 = EX (SP), HL: exchanges HL with stack memory.

Seed 2002; match to the contemporaneous modal tape

Corrected core = core C1

Ring stability permits small nonzero observed changes.
Hardware remainder: expected differences; other remainders: flags/differences.
