

a

— BFF as published (n = 24) — wrapping pointer (n = 24) — literal push (n = 12) — wrap + literal push (n = 12) — wrap + literal, no halt (n = 12)

b**c****d**

literal-write instruction	tar benign	tar lethal
present	Z80 open, then closed · 67 of 80 worlds (20 of 20 at L = 16) modified BFF, harmless brackets open for ever · 12 of 12 worlds no closed design exists	modified BFF, lethal brackets open, then extinct · 12 of 12 worlds Z80, zero halts born closed, late · 10 of 10 worlds the open beginning never happens
absent	BFF as published, harmless brackets born closed · 7 of 12 worlds; lost again in 4	BFF as published born closed · 28 of 28 (published and wrapping pointer)

lethal tar ends the open phase before it begins (Z80) or soon after (BFF); life then starts closed if a closed design exists, and late
