

c**e****d****open · the first replicator**

executes partner code

copies 0.68 of partners; damaged in 0.33 of encounters (medians, 20 worlds)

RET NZ · 16 bytes

its written bytes double as its return addresses

JR NZ · 50 bytes

a relative jump of 16 bytes back, through the address wrap

DJNZ · 20 bytes

a counted jump of 27 bytes back, through the address wrap

LDIR · 20 bytes

the block copy repeats in place

closed: copies 1.00 of partners · 0.00 self-damage

closure is a cycle in control flow, not a wall around the bytes
