

Heredity before individuality

The first replicator:
the word 01 c5, repeated.

First four bytes

LD BC, nn PUSH BC

Operand = output: c5 01

1 writes itself

2 runs into B

3 comes back

Later: a return evolves

c0 RET NZ

Execution returns to
the organism's own code.

Its bytes remain exposed.

Organism A · 16 bytes

Partner B · 16 occupied bytes

Organism A

writes into occupied B

b
