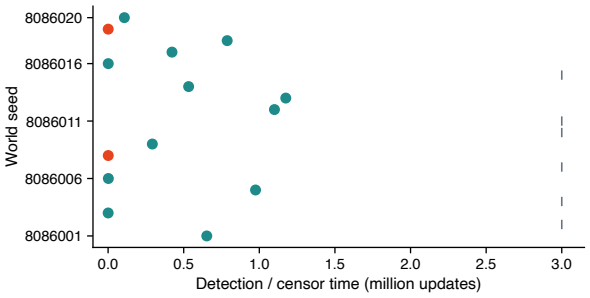
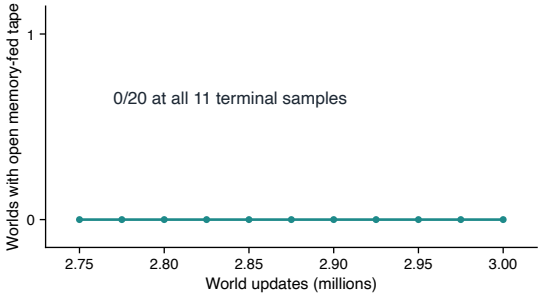
a Registered S2: all 20 worlds



S2: coherent-fetch 8086; first detected heritable copier
Teal: no partner stream fetch; red: fetch ≥8/16 encounters
Grey ticks: 6 nondetections at 3 million world updates

b R2: open memory-fed persistence



Same 20 S2 worlds as a; terminal persistence = 0/20
Earlier samples combined: 1/20 worlds ever positive by 3M

c Registered evolved law: untested

Family test	Candidates	Eligible	Unresolved
L1	1337	0	0
L2	1337	0	724
L2 excluding L1	1337	0	724

L2 support suspended: zero certified cases

Zero eligible cases do not mean zero capacity

c–e: candidate tapes from same 20 S2 worlds as a
L1 frozen overlap / L2 broader pure-copy certificate; d = L2 ledger

d Registered exclusions and unresolved cases

Status	Reason	n
culture-negative	culture not positive	558
excluded	original partner read	55
unresolved	Opcode 07 (POP ES)	708
unresolved	Opcode 0c	2
unresolved	Opcode 0f	1
unresolved	Opcode 21	1
unresolved	Opcode 31	1
unresolved	Opcode 5f	10
unresolved	Opcode e5	1

L2 candidate tapes: 558 culture-negative, 55 excluded
724 unresolved (708 at POP ES); total 1,337

e EXPLORATORY: admissions and exact-law panel

d bytes	Genotypes	Worlds	Encounters	Mismatches
4	10	10	538,240	0
16	22	20	1,686,400	0

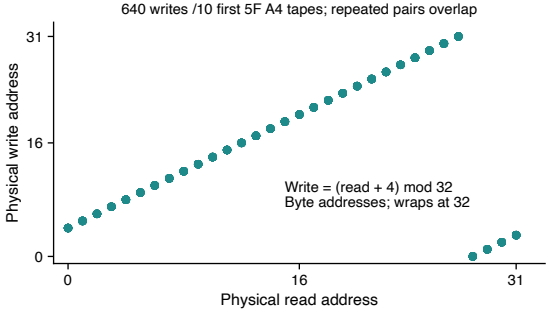
779 culture-positive world/tape records -> 600 admitted -> 32 selected

Selected L16 genotypes: d4 has zero free coords; d16 zero erased coords

32 genotypes / 20 worlds; 2,224,640 encounters

d = physical copy offset; 32 selected genotypes from admissions
Mismatch: predicted vs actual bytes, core and ancestry
Post hoc; 590 admitted d16 +10 d4; not registered evidence

f EXPLORATORY 5F A4 x y: d4 physical copies



Snapshot fates: median new tiled offspring /512 encounters
S2 20 worlds: 94.5; Z80 G 20 worlds: 214.5; five times/world
Across soup/uniform partners and donor A/B roles; separate from map
